

Empirical examples of selective interference

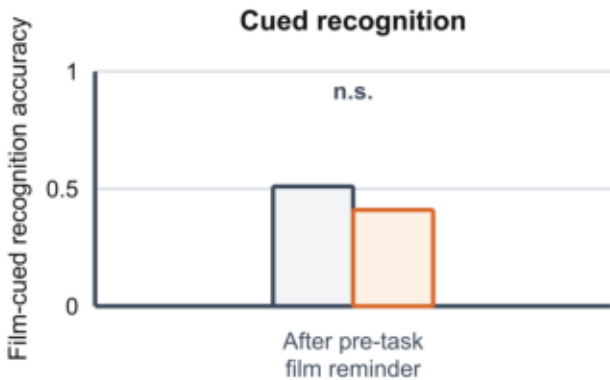

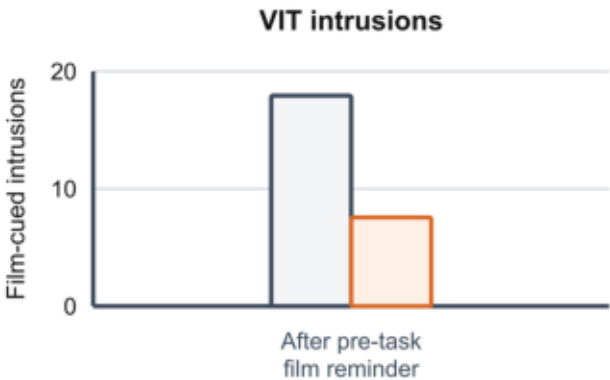

James et al. 2015
Exp. 2
24-hr reminder x Tetris;
diary + verbal recognition

Lau-Zhu et al. 2019
Exp. 1
30-min reminder; diary +
voluntary free recall

Lau-Zhu et al. 2021
30-min reminder; trauma-
film-cued VIT +
recognition

Comparison / rest Tetris interference

Bars plot published condition means in native units; y-axis scales differ across outcomes.

Empirical examples of selective interference.

Rows show exemplar trauma-film studies selected to span core methodological variants in the review table: a delayed reminder-by-Tetris design, a voluntary free-recall test, and a laboratory vigilance-intrusion task with trauma-film cues. Gray bars show comparison or rest conditions, and orange bars show Tetris interference. Bars plot published condition means for film-related outcomes in native units, not model output; y-axis scales differ across outcomes.
